Introduction

What is a Chatbot?

A chatbot is a computer program.
It talks with users automatically.
It reads your message and replies fast.

About This Project

Our chatbot is made for hotels.
Customers ask common questions.
The chatbot gives quick answers.

Common Questions Customers Ask:

- What is check-in time?
- Is WiFi free?
- Is a room available?
- How to book a room?

Problem Statement

Too Many Questions

Customers ask the same questions every day. Staff get very busy.

Slow Response

Staff take time to answer each person. Customers have to wait.

Staff Overload

Too much work for staff. They cannot focus on important hotel tasks.

✅ Solution:

A chatbot gives automatic answers to customers.

It saves staff time and makes customers happy.

Objectives

Our project aims to achieve these goals:

01

Answer Questions

Answer customer questions automatically without staff help.

02

Save Time

Customers get answers in seconds, not minutes.

03

Reduce Staff Work

Staff are free to focus on important hotel tasks.

04

Provide Fast Service

Give quick and accurate service to every customer.

How the System Works

Step-by-step flow of the Hotel FAQ Chatbot:

01

User

User asks a question

02

System

System receives the question

03

AI

AI processes the question

04

Answer

Chatbot sends the answer

🔄 **This process happens in less than 1 second! The user gets an instant reply.**

No staff needed. The chatbot works 24 hours a day, 7 days a week.

Technologies Used

These tools are used to build the Hotel FAQ Chatbot:

Python

Main programming language. Used for the chatbot logic.

Flask

Web framework. Connects the chatbot to the website.

HTML

Used to design the chatbot web page structure.

CSS

Makes the chatbot page look beautiful and attractive.

JSON

Stores all question-answer data for the chatbot.

AI Model

Understands questions and finds the best answer.

Advantages

Benefits of using the Hotel FAQ Chatbot:

Fast Response

Answers are given in less than 1 second. No waiting time for customers.

Easy to Use

Simple interface. Anyone can use it without training or experience.

Available Anytime

Works 24 hours a day. Even at night when staff are not working.

Future Scope

What we plan to add in the future:

Phase 1

Voice Chatbot

Customers can speak their questions. The chatbot will listen and give a voice answer.

Phase 2

Multiple Languages

Customers from any country can use it. Support for Hindi, Marathi, and more languages.

Phase 3

Mobile Application

A mobile app for Android and iOS. Customers can use the chatbot from their phone.

Conclusion

🏨 **The Hotel FAQ Chatbot helps customers get quick answers.**

It improves hotel service and reduces staff workload.

This is a simple, fast, and useful system for modern hotels.

- ✅ Simple AI chatbot system
- ✅ Answers common hotel questions
- ✅ Saves time for staff and customers
- ✅ Available 24/7 without breaks
